

for players and laptop  
Erik Carlson  
2018

A pd patch (available upon request)  
plays 8 sine tones that begin at 0hz and rise 5 hz per second.

Using designated keys, any player can, at any time, reset any of the sine tones back to 0  
(at which point it will automatically start ramping up again).

(At the start of the piece, each tone needs to be triggered by a player to begin the initial ascent).

Play for as long as desired.
