

second percussion duo
by Erik Carlson
2016 f

or Greg Stuart

Both players play on identical resonant wood bodies (cigar boxes, violins, etc).

Players make sounds by knocking on their object with their knuckles.

On headphones, one player listens to the right channel of the provided pd patch, and the other player listens to the left channel.

The pd patch plays a sample of a wood box being struck, at random volumes (from very loud to inaudible) at random intervals ranging from 0.1 seconds to 10 seconds.

2 independent streams go out each channel.

Players imitate what they hear on the headphones (timing and dynamic).

Play for as long as desired.
